

ProClear Algaecide

For Ponds, Dugouts, Lagoons, Potable Water Tanks

ProClear Algaecide

ProClear is premium Canadian-made Algaecide that is ideal for ponds, lakes and even drinking water tanks and reservoirs. Easy to use and effective, ProClear Algaecide makes treating and preventing algae safe, simple and economical.

ProClear Algaecide is absorbed by each micro-organism and adversely affects the metabolism, resulting in the death of the algae or bacterium system. Once inside the cell of the micro-organism, the copper reacts with sulphur containing amino acids, blocking photosynthesis.

Why Experts Recommend Treating Preventatively

- Treating after algae blooms is up to 3 times more expensive than treating preventatively!
- Treating after a bloom has taken place requires far more product, leading to disruption of natural biological processes
- Treating preventatively reduces the concentration of the algae that is killed, therefore reducing the chance and rate that toxins can be released from dying blue-green algae

Benefits

- Algae control
- Algae prevention – Save time and money treating preventatively!
- Bacterial control
- Odour reduction
- Eliminate bad taste of drinking water from algae
- Safely treat toxic blue-green algae (Some dead algae releases toxins)
- Reduce solids from water column

Applications

- Ponds & Lakes
- Algae control
- Odour reduction
- Dugouts, fish ponds (maximum 1 liters per 1000000 liters of water)
- Sewage lagoons, manure pits
- Septic Systems
- Residential drinking systems
- Potable Water Tanks

Product Features

- NSF 60 - Drinking Water Certified
- Safe & Easy to use
- Safe for livestock, fish, wildlife
- Registered in Health Canada Pest Management Regulatory Agency
- Made in Canada
- Available in 4L, 10L or 208L(Barrel)
